

THEME Competence Mechatronics June 2014

Competence Areas (core work tasks)	Steps of Competence Development			
1. Maintaining and assuring the reliability of mechatronic systems.	He/She can perform the basic scheduled maintenance on mechatronic machines and systems and adhere to the equipment maintenance plans.	He/She can master the maintenance procedures for mechatronic systems such as the use of service documents and maintenance plans and, if faced with new challenges, can make the necessary adaptations.	He/She can use preventive maintenance to assure the trouble-free operation of mechatronic systems. In addition, he/she can modify operational sequences to implement quality-assurance measures.	He/She can develop the necessary procedures for maintenance of mechatronic devices and systems, and can schedule the maintenance and quality-assurance procedures.
2. Installing and dismantling mechatronic systems and facilities	He/She can use written instructions to install and dismantle individual components (e.g., sensors, actuators, drives, motors, transport systems, racks) that form a functional group of mechatronic systems.	He/She can master the selection of hardware and software for mechatronic systems (e.g. sensors, actuators, interfaces, communication procedures) and can provide and test simple programmable logic control programs (PLC) according to production process requirements.	He/She can provide independent mechatronic solutions for the construction of production lines, assure their overall ability to function, and, in addition, can use both existing and modified standard components.	
3. Installing and adjusting mechatronic components in systems and production lines	He/She is able to install and adjust mechatronic components (e.g., individual electro pneumatic standardized valves, sensor and actuator units).	He/She can install and adjust components of mechatronic subsystems (e.g. linear drives, measuring systems, transport drives, measuring systems, transport systems).	He/She can install and adjust complex mechatronic facilities that include diverse technologies and instrumentation and control (I&C) equipment, adjust the associated parameters, test the facilities overall functions, and assure their reliability.

<p>4. Designing, adapting, and building mechatronic systems and facilities on the basis of client needs and site plans</p>	<p>He/She can use machine tools controlled either manually or via computerprogram to fabricate (according to production designs and customer requirements) the individual components for mechatronic systems. He/she can provide simple designs and descriptions of mechatronic subsystems and can use basic CAD applications.</p>	<p>He/She can build simple mechatronic subsystems by using engineering drawing and can install the devices according to specific production needs. He/She can act on extensive knowledge of standards and regulations (e.g., on surface treatments) and is able to use CAD's more advanced functions (e.g., interference check).</p>	<p>He/She can build mechatronic systems by using both original construction techniques and previously signed parts. He/She fully understands CAD functions and can document system developments (e.g., parts lists, descriptions of function, operating instructions).</p>	<p>He/She can design and build autonomous mechatronic subsystems and, with suitable measuring and testing facilities, can assess the necessary production accuracy. He/She can document the results with quality-control systems.</p>	<p>He/She can make independent adaptations to the various devices (including selection of drives, sensors, PLC) and can use CNC programs for building the system. He/ She can, through a digital mock up, assemble and simulate the functioning system and use computeraided computations (e.g., FEM). He/She can perform cost-benefit analyses (e.g., as a basis for deciding whether components should be bought or individually constructed.)</p>	<p>He/She can independently develop complex mechatronic systems and can calculate the economic usefulness of the system. He/She can optimise CNC programs for the manufacturing of complex mechatronic devices and systems and monitor the automated quantity of an open loop control system.</p>

<p>5. Putting mechatronic systems into operation and providing clients with technical and economic support</p>	<p>He/She can, according to specifications and blueprints, put mechatronic devices into operation and provide support to the client in the hand-over phase.</p>	<p>He/She, after considering the enterprise's needs and basic conditions, can put the mechatronic systems into operation, create the necessary documentation, advise the customer on safe operations of the devices, and advise on future technology selection.</p>	<p>He/She, after considering all basic conditions, can master the start-up of interconnected mechatronic systems and machines, and can provide the necessary documentation including a manual. He/She can review client needs and configure machines that provide solutions. He/She can train the customer where necessary and provide support for safe operating procedures.</p>	<p>He/She can evaluate customer requirements for mechatronic facilities, develop solutions, and can plan the system's implementation and operation.</p>	<p>He/She can direct, including scheduling and time management, the start-up of the project from the creation of a proposal to the client's acceptance.</p>
<p>6. Supervising and evaluating both the process sequences of mechatronic systems and facilities and the operational sequence (including quality assurance)</p>	<p>He/She can supervise process sequences according to specifications as well as implement any requested quality control measures.</p>	<p>He/She can independently supervise the process sequences, evaluate the results, operate an accompanying statistical process control (SPC) for the quality control plan, and prepare simple work schedules, including production schedule and time management.</p>	<p>He/She can operate and supervise mechatronic facilities, choose testing and monitoring plans, set up the accompanying SPC, seek the optimal results of the production line according to material flow, and provide work schedules including standard production times.</p>	<p>He/She can master the monitoring of complex mechatronic systems using virtual instruments and PPS systems as well as open loop control for the optimisation of machinery arrangement, material flow analysis, and scheduling.</p>	<p>He/She can optimise the process cycles of mechatronic production lines, provide instructions on modifying the PPS systems (e.g., adjustment to SAP systems) and introduce quality systems for continuous improvement processes (CIP/KVP).</p>

<p>7. Installing, configuring, programming and testing hardware and software components for control and regulation of mechatronic systems and facilities</p>	<p>He/She is able to install and configure programs for hardware and software components as well as set up simple programmable logic control programs (PLC).</p>	<p>He/She can master the selection of hardware and software for mechatronic systems (e.g. sensors, actuators, interfaces, communication procedures) and can provide and test simple programmable logic control programs (PLC) according to production process requirements.</p>	<p>He/She can integrate and configure program-, control-, and regulation mechanisms in mechatronic systems, program simple devices (in co-operation with developers), and simulate the program sequence before start-up.</p>	<p>He/She can develop, test, and configure hardware and software solutions for networked mechatronic systems; and can monitor system conditions with suitable measuring and visualisation tools.</p>
<p>8. Preparing and distributing the technical information for adjustment of each enterprise's mechatronic systems</p>	<p>He/She can provide descriptions and designs of mechatronic subsystems and is familiar with the basic CAD applications.</p>		<p>He/She can fully understand the management of technical information documents for mechatronic systems and can prepare and adapt these documents according to an enterprise's specific operating requirements.</p>	<p>He/She is able to analyse complex operational sequences separately in order to understand the connections and draw up maintenance and production procedures. He/She can understand that the system parameters are important for the equipment's functions and can independently assess and document the wear and general conditions of the mechatronic equipment.</p>
<p>9. Diagnosing and repairing malfunctions with mechatronic systems and facilities, advising clients on avoiding malfunctions, and modifying and expanding mechatronic systems</p>	<p>He/She can diagnose and repair errors and malfunctions on the simple components and devices in the mechatronic systems. He/She can use the necessary checking, measuring, and diagnostic tools.</p>	<p>He/She can independently correct problems in mechatronic production equipment with the help of (computer-aided) diagnostic systems and the use of expert systems, databases, and error documentations.</p>	<p>He/She can diagnose and repair errors and disturbances in complex mechatronic equipment and is able to advise clients on how to avoid sources of malfunctions through changes or upgrades in the equipment and system.</p>	<p>He/She can develop, through analyses of malfunctions in the mechatronic equipment, a monitoring and diagnostic system.</p>

Fields that are not completed could not be covered by consortium. Matrix includes also university level.
